BULBS EASY TO GROW

Success Is Sure With P.-W's Selected Stock

For Outside Planting

The Time to Plant: First of all the fact should be emphasized that the **Autumn Months** and not **Spring** is the proper time to plant Hyacinths, Tulips, Narcissus, Daffodils, Crocus and other spring flowering bulbs and hardy perennial plants. Most of the varieties described in this list are ready for delivery the latter part of September or early October and should be planted as soon as convenient after that time, but surely before the ground freezes. "Lily of the Valley" and some of the Hardy Lilies are not danger until November or December; should there be danger of the ground freezing before that time, cover the space to be planted with leaves or straw and the bulbs can then be planted at your convenience after arrival.

Kind of Soil: Any good, moderately rich, well drained soil is suitable for most bulbs; avoid heavy and boggy soils as poor drainage is fatal. In a stiff clay formation, supply a small quantity of sand or coal ashes at the base of each bulb and enrich soil with bone meal, "Plant Life" or very well rotted manure, but do not use fresh stable manure under any conditions.

Proper Depth: Depends upon the size of the bulbs. A good rule is to place each bulb from one and one-half times to twice its own thickness below the surface of the ground. In districts of extremely cold temperature it is advisable to mulch the beds with leaves or straw during the severe weather, but care should be taken to remove the covering upon the approach of spring. In Salt Lake and equally mild climates no such protection is necessary.

Distance Apart varies with the variety from 2 to 3 inches for Crocus to 12 to 18 inches for Lilies. The proper space is indicated under the respective headings in this list.

For Indoor Planting

When the bulbs arrive in the fall place them directly into the pots or containers in which you wish them to bloom, using for this purpose a light loamy rich soil; setting them from two to four inches apart and just deep enough to cover the top of the bulb. Do not make the mistake of filling the pot or container too full so as not to allow margin for watering. After planting, water thoroughly and put them away in some cool, dark room, for at least six weeks before bringing any of them to the living room. The only attention necessary when in the dark is to see that they are kept moist. You can regulate the time of blooming and secure a continuous succession by bringing them to the living room at regular intervals during the winter. Be sure to keep them well watered after bringing them to the light and heat.

Instead of putting the planted bulbs in a dark, cool room in the inside many prefer to dig a trench in some corner of the garden, covering pots and all about six inches deep, being careful to provide a thin layer of ashes at bottom to prevent earth worms. By raking a few leaves over the top to prevent the ground from freezing, the pots can be lifted anytime desired during the winter and brought into bloom in the living room in a very short time.

Water Culture: Large size Hyacinths, Chinese Lilies, Paper White and Soleil d'Or Narcissus can be easily grown in water in glasses and bowls. By successive planting continuous bloom from November till March can be had. It's mighty interesting to watch their development.

CAUTION—Don't plant bulbs in new pots without first soaking the pots a few days in water.

TAKE THE GLOOM OUT OF WINTER

Indoors—Right in Your Own Home—Grow Bulbs for Winter Cheer

Here is how you can enjoy a real colorful window or conservatory flower garden during this winter with no trouble and a slight expense for materials.

Even the "Apartment House Dweller" Can Do This

What to Do

USE PREPARED BULB FIBRE

And no need of ugly pots either; use a bowl of your favorite color blending with the furnishing scheme of the room. This will lend an additional charm to your plant—you will enjoy it so much more.

Our Bulb Fibre is a complete substitute for soil scientifically prepared for use in receptacles without drainage. It is clean and odorless; no saucers necessary; no fear of staining the woodwork or table coverings. And bulbs really grow better in it than in soil for it absorbs and holds an even moisture and on account of its fluffiness allows the roots to penetrate freely. This Fibre is cleverly impregnated with plant-food in such a manner that it becomes available gradually but continually as required by the plants to assure a steady, healthy, and vigorous growth.

Prices Prepared Bulb Fibre

Lb., 20c; 5 lbs., 90c, postpaid. Not prepaid, 10 lbs., \$1.25; 100 lbs., \$10.00.

Bulb Bowls

We carry a large assortment of Bulb Bowls, embracing most every desirable size, type, design and color. Prices range from 35c to \$1.00 each, postpaid.

How to Do It

DIRECTIONS FOR USING BULB FIBRE

Wet the Fibre thoroughly until it has absorbed all the water it can hold. This is best done in a pail or pan. Then squeeze out nearly all the water and it will be just right for planting. Fill the bowl three-fourths full or to within a few inches of the top, according to the size of the bulb. Press down gently (never pack it down), set bulbs at the proper distances, and fill up with Fibre. Press it gently around the bulbs but **don't** pack it down. Keep the Fibre damp by spraying it lightly every day but never allow it to become too wet. All bulbs, except Freesias and Callas, should be kept in a dark place to develop roots before sprouting. Hyacinths, Daffodils, and Tulips require from four to six weeks; Paper-White and Soleil d'Or Narcissus and Chinese Lilies from two to three weeks. By bringing in a few bowls at intervals and making additional plantings one may enjoy blooming plants all through the winter months.

P.-W.'s MAMMOTH TULIPS THAT FLOWER IN MAY

English Garden Tulips This class is properly a division of the Mammoth Flowering Tulips. The shape of the flowers is distinctive, being long and pointed, and the petals are frequently reflexed. While the flowers are large and gracefully formed, in general this class does not grow quite as tall as the "Giant Flowering" group, yet they bloom the same time and bed well together. Lending an indescribable charm and grace to the Spring Garden, they have been aptly designated the "Patriotians" of the tulip family. (Same culture as "Giants." See next page.)

FLOWERING TULIPS

EVERY TYPE, STYLE, HUE AND COLOR

Colorful Giant Flowering Tulips These Tulips are marvelous for the Herbaceous Border, massed in clumps along the edge of shrubbery, or as cut-flow-ers for vases.

Listed under this class are all the very desirable varieties of the so-called "Ideal-Darwin," "Darwin," "Breeder," and "New Hybrids." There is really no sense to the past practice of separating these tulips into different groups as the bloom periods, height and habits of growth of all are within the same range and they are all really derived from the same source. So under whatever name you have been buying in the past you will find your favorite in this list.

Plant 6 inches apart, 4 to 5 inches deep in heavy and 6 inches in light soils. For convenience in figuring allow 4 bulbs for each square foot to be planted.

The number immediately following the name is the average height in inches.

THE FRAGRANT HYACINTH

THE "BIG TEN" RAINBOW COLLECTION

Garden Culture. Bulbs may be planted from the end of September until very severe weather sets in. The beds should be raised a few inches above the surrounding ground, to prevent lodgments of water, which causes bulbs to rot. Bulbs should be set 6 to 8 inches apart and 6 to 8 inches deep. If the soil is dry at planting time it should be watered and kept moist while the weather permits.

Hyacinths in Pots. Get rich, light soil or Bulb Fiber. If soil, provide drainage. Break off any offsets which appear at the base of the bulbs, and, in potting, place each bulb so that its top shall be half an inch below the surface of the soil, and about an inch below the rim of the pot.

P.-W.'S LOVELY DAFFODILS

SELECTED BULBS FROM AMERICA'S SPECIALISTS

Reliable Narcissus (Northwestern Grown Bulbs.) There are no hardier bulbous plants with more merit than the Narcissus or Daffodil. They grow well in almost any climate or condition, sun or shade, moist or dry, although they have a preference for good, deep soil, and a partly shaded position.

They are equally desirable for pot culture for winter flowering; three or four bulbs can be put in a

five or six-inch pot and the whole winter and early spring months can be made bright with their exquisite gold and silver blooms. Once planted, they need no further attention, the clump multiplying and giving better results each year, and from an original planting of a few hundred bulbs, in two or three years can be cut thousands of flowers.

Probably no perennial is more universally acclaimed and loved, and we know of none that justifies such popularity more than the Peony.

Peonies are best planted from the latter part of September until the ground freezes in the Mountain States.

An important point to observe in the planting of Peonies is not to plant too deep. The roots should be placed so that the crowns are covered with two or three inches of soil. Too deep planting is a frequent cause of shy flowering. Proper distance apart is from 3½ to 4 feet.

NOTE: Figures following varieties indicate the rating given them by the American Peony Society. The highest rating a peony can receive is 10. There is no variety yet with such a rating; 9 is excellent, 8 is very good, 7 is good.

FERN LEAVED PEONY

FRUIT TREES

At our Nurseries we have a particularly fine lot of strong, healthy trees. This stock has been selected and critically grown to meet the requirements of orchardists planting for eastern or local markets. We believe, also, those of our patrons who are planting a small orchard for home use will find sufficient variety to amply fill every want in the fruit line. Detailed planting and cultural directions, free with each order. Ask for them. Our trees are very carefully graded to size and height but in determination of grade the Caliper usually governs.

Ordinary seasons we are able to deliver fruit and ornamental trees the latter part of October. In sections where ground freezes up early, we advise spring delivery. Prices quoted are f.o.b. Salt Lake City.

It is not necessary to buy 10 or 40 of a single variety to secure the respective quantity rates; 10 or more assorted fruit trees may be priced at the ten rates applying on the particular varieties selected, and 40 or more may be priced at the 40 or more price schedules. On all orders below ten, the each prices apply.
